Knowledgebase Assistant – Requirement Document

1. Document Overview

This document defines the functional requirements and scope of the Governed Knowledgebase Assistant developed in Google Opal for Topic 11.

2. Objective

Build an AI-powered workflow that answers routine employee questions using uploaded SOP documents and routes sensitive HR, legal, or compliance queries for human review.

3. Functional Requirements

FR-01: Employee Query Input

The system must provide an input step for employees to enter workplace questions.

FR-02: SOP Knowledge Sources

The workflow must use uploaded static SOP documents as its knowledge sources.

FR-03: Governance Classification

The system must classify employee queries into exactly two categories:

- OPERATIONAL
- SENSITIVE

FR-04: Operational Query Handling

Operational queries must be routed to the Grounded Research Agent.

FR-05: Grounded Answer Generation

The Grounded Research Agent must:

- Retrieve relevant information from the uploaded SOP documents.

- Generate answers based only on available document content.
- Identify the source SOP document.
- State when the available documents do not contain sufficient information.
- Avoid inventing company policies or procedures.

FR-06: Sensitive Query Handling

Sensitive queries must be routed to the Human Escalation Handler.

FR-07: Human Escalation Preparation

The Human Escalation Handler must prepare a notification containing:

- Recipient
- Subject
- Original employee query
- Available employee details
- Classification
- Reason for escalation
- Required human action

FR-08: Final Output

The workflow must display the appropriate response generated by the selected workflow step.

4. Non-Functional Requirements

- **Accuracy:** Answers must be supported by uploaded SOP documents.
- **Privacy:** Sensitive employee queries must be treated confidentially.
- **Safety:** The assistant must not independently resolve legal or compliance complaints.
- **Clarity:** Responses must be professional and easy to understand.
- **Governance:** Sensitive queries must receive human review.

5. Scope

In Scope

- SOP document upload and retrieval.
- Employee query collection.

- Governance classification.
- Conditional workflow routing.
- Grounded operational answers.
- Human escalation notification preparation.
- Final response display.

Out of Scope

- Automatically resolving legal or compliance complaints.
- Interpreting individual employment contracts.
- Making disciplinary decisions.
- Claiming successful email delivery without confirmation from an email integration.

6. Expected Deliverables

- Google Opal workflow.
- Static SOP demonstration documents.
- Prompt documentation.
- Concept guide.
- Requirement document.
- Implementation plan.
- Testing plan.
- Trainer walkthrough demonstration.
