Knowledgebase Assistant – Testing Plan

1. Testing Objective

Verify that the Knowledgebase Assistant classifies employee queries, routes them appropriately, generates SOP-grounded responses, and prepares sensitive-query escalations.

2. Test Environment

- **Platform:** Google Opal
- **Application:** Knowledgebase Assistant
- **Knowledge sources:**
  - `employee_leave_policy.md`
  - `it_support_sop.md`
  - `expense_reimbursement_policy.md`

3. Test Cases

TC-1101: Operational Leave Query

Input:

How do I submit a planned leave request?

Expected Result:

- Classification: OPERATIONAL.
- Query routed to Grounded Research Agent.
- Response displayed with an SOP source.
- Answer accurately reflects the uploaded SOP.

Observed Result:

The workflow displayed a planned leave procedure and identified `employee_leave_policy.md` as its source. All six procedural statements were verified against Section 3 of the uploaded SOP.

Status: PASS

TC-1102: Sensitive Harassment Query

Input:

I am experiencing repeated harassment and bullying from my manager. I feel uncomfortable reporting this directly to my manager. I want to report this issue confidentially and request help from HR.

Expected Result:

- Classification: SENSITIVE.
- Query routed for human review.
- No substantive automated investigation or resolution.
- Safe human-review response displayed.

Observed Result:

The workflow displayed a SENSITIVE classification and the appropriate human-review response.

Status: PASS

4. Additional Verification Items

Test ID	Verification	Status
TC-1103	Separate escalation notification output	PASS
TC-1104	Email delivery integration	NOT CONFIGURED
TC-1105	Full SOP answer grounding verification	PASS

5. Test Summary

The workflow successfully demonstrated:

- Operational query classification and routing.
- Sensitive query classification and human-review handling.
- Preparation of a complete escalation notification.
- Verification of the planned-leave answer against the uploaded SOP.

Email delivery has not been configured or confirmed.

6. Known Limitations

- Demonstration SOP documents are fictional examples, not actual company policies.

- The workflow does not independently resolve sensitive HR, legal, or compliance matters.
- Preparing an escalation notification does not mean an email has been sent.
- Email delivery requires a configured and successfully tested email integration.

7. Overall Testing Conclusion

PASS: Operational classification, sensitive classification, escalation notification preparation, and planned-leave SOP grounding.

NOT CONFIGURED: Confirmed email delivery.

The demonstrated workflow meets the verified classification, routing, response-generation, and escalation-notification requirements. Actual email delivery remains outside the verified implementation.
